

## Project Types and Descriptions

### **Project Type 4: Model/Demonstration Project**

Model/Demonstration projects give students the opportunity to research a topic and/or build a model of something they are interested in and then present it. Learning about the heart, the digestive system, or the solar system can be very exciting. How does an internal combustion engine work? Find out, and share your answer!

#### ***Guidelines***

- Pick something you are interested in studying, and show that you understand what you studied.
- Make a model that shows things completely and correctly, so someone who hasn't studied your subject understands your topic.
- Create a display board showing what you learned. There is space in front of your display to place your model if you'd like.

#### ***Questions for a Model/Demonstration Project***

1. What is the question I want to answer?
2. What materials did I use to build my model? How did I use those materials to build my model?
3. What books or resources did I use?
4. Who helped with my project?
