Project Types and Descriptions

Project Type 2: Research Project

Special interest projects are an opportunity for students to study a science related topic they are interested in and create a display showing what they have learned. The display could include a report, pictures, drawings, charts, photographs, etc.

Guidelines

- Pick something that you are interested in studying.
- Learn about that topic through books, computers, magazines, etc.
- Create a display showing what you've learned.

Questions for a Special Interest Project

1. Why did I choose this topic to study (i.e. what was my question about this topic?)
2. What did I learn about this topic? Where did I get information about my topic?
3. Who helped me with my project?
